

Free QA Audit – Sample Report

Prepared by: Ziara TechQ Labs | **Audit Type:** Free QA Audit (Sample)

Application: Web Application (Sample) | **Purpose:** Identify quality risks, testing gaps, and automation readiness

Audit Scope

• Login & Authentication • Core User Flows • UI & Usability • Error Handling • API (High-level) • Basic Security Checks

Key Observations

Area	Finding	Risk
Login	No lockout after multiple failures	Medium
Forms	Missing mandatory field validation & weak error messages	High
UI	Responsive issues and inconsistent spacing on small screens	Medium
API	Inconsistent error responses and missing negative cases	Medium

Risk Analysis

High-risk issues may lead to incorrect data submission and security concerns. Medium-risk issues can impact user experience, scalability, and long-term maintainability.

Automation Readiness Snapshot

- UI lacks stable selectors (data-test-id)
- Dynamic element IDs detected
- No existing regression automation suite
- CI/CD automation not configured

Actionable Recommendations

- Improve validations and user-friendly error handling
- Add API negative & boundary testing early
- Introduce structured test cases & regression checklist
- Prepare UI for automation before scaling features

What You Get After Full QA Engagement

- ✓ Detailed test cases & execution reports
- ✓ Manual + Automation testing support
- ✓ API & database validation
- ✓ Defect tracking with clear metrics
- ✓ Release sign-off & quality summary

Audit Summary

Overall Quality Status: Needs Improvement – Quality risks identified that should be addressed before production scaling.
